

## WHAT IS CLAIMED IS:

SUB [c1]

A cable support apparatus for a raised floor system, which comprises:  
 a plurality of support members being adapted to attach one each to a portion of a support pedestal of a raised floor system at a vertical displacement below an uppermost surface of the support pedestal; and  
 a cable support basket adapted to depend from the plurality of support members so as to form a portion of a cable support pathway, wherein the cable support basket is configured and dimensioned to have a length and width which define an area less than that of a floor panel of the raised floor system, such that when the floor panel is removed the cable support basket may pass through the opening formed in the raised floor system by the removed floor panel.

[c2] The cable support apparatus according to claim 1, wherein the cable support basket includes a plurality of intersecting elements secured together in a substantially planar arrangement to support cables thereon.

[c3] The cable support apparatus according to claim 2 wherein the cable support basket further includes vertical element portions formed along at least one side to facilitate containment of cables placed on the plurality of intersecting elements.

[c4] The cable support apparatus according to claim 2 wherein the plurality of intersecting elements are formed from wire stock.

[c5] The cable support apparatus according to claim 1, wherein the cable support basket is configured and dimensioned such that upon installation in conjunction with the raised floor system, the cable support basket is disposed vertically beneath a corresponding floor panel of the raised floor system.

[c6] A cable support apparatus for a raised floor system, which comprises:  
 four support members being adapted to attach one each to a portion of a support pedestal of a raised floor system at a vertical displacement below an uppermost surface of the support pedestal; and  
 a cable support basket adapted to depend from the four support members so as

Sub B3 Cont

to form a portion of a cable support pathway, wherein the cable support basket is configured and dimensioned to have a length and width which define an area less than that of a floor panel of the raised floor system, such that when the floor panel is removed the cable support basket may pass through the opening formed in the raised floor system by the removed floor panel.

[c7] The cable support apparatus according to claim 6 , wherein the cable support basket includes a plurality of intersecting elements secured together in a substantially planar arrangement to support cables thereon.

[c8] The cable support apparatus according to claim 7 wherein the cable support basket further includes vertical element portions formed along at least one side to facilitate containment of cables placed on the plurality of intersecting elements.

[c9] The cable support apparatus according to claim 7 wherein the plurality of intersecting elements are formed from wire stock.

[c10] The cable support apparatus according to claim 6 , wherein the cable support basket is configured and dimensioned such that upon installation in conjunction with the raised floor system, the cable support basket is disposed vertically beneath a corresponding floor panel of the raised floor system.
